

Take **Control** of your **Plants** and your **Profits**

AgRite's newest product, our multi-function laser level sensor. The **LevelRite** sensor allows users to monitor tank levels up to 25 feet. For liquid applications, simply add your PVC pipe cut to the needed length, then place it between our top laser unit and the bottom float assembly. The level is displayed on the local LED screen. You can install the **LevelRite** sensor by inserting it in a 2 inch threaded tank or bulk head fitting. Digital and analog outputs are provided for monitoring and control use. **LevelRite** components are chemical safe and perfect for process, fertilizer and water tanks. With the threaded laser assembly, **LevelRite** also works great for bulk material in silo, hopper and other distance measuring applications. Available with weather protective shield and bug guard.
